Sec. 1. (a) Except as provided in subsections (b) through (d), the requirements in this article apply to all persons that store:

- (1) minibulk pesticide containers;
- (2) bulk pesticide containers; or
- (3) pesticides within a wellhead protection area.

(b) The requirements in this article do not apply to persons that transport, but do not otherwise store, unopened pesticide containers.

(c) The requirements for operational area containment in 355 IAC 5-3 do not apply to persons that store antimicrobial pesticide containers labeled for legal use in:

- (1) food handling or storage establishments premises and equipment;
- (2) commercial, institutional, and industrial premises and equipment;
- (3) residential and public access premises;
- (4) medical premises and equipment;
- (5) human drinking water systems;
- (6) materials preservatives;
- (7) industrial processes and water systems;
- (8) antifouling coatings;
- (9) wood preservatives; or
- (10) swimming pools.

(d) The requirements for operational area containment in 355 IAC 5-3 and secondary containment in 355 IAC 5-4 do not apply to persons that store minibulk pesticide containers for less than forty-five (45) days, as verified by written delivery documentation. Sec. 11.5. "Service container" means any package, can, bottle, jug, bag, or other containing device used to transport a diluted or undiluted pesticide from a storage site to an application site, and return to the storage site, if needed. The term shall not mean any of the following:

- (1) An original labeled pesticide container provided by the manufacturer.
- (2) A container larger than the original labeled container provided by the manufacturer.
- (3) A device for measuring a pesticide.
- (4) Equipment used solely for the application of a pesticide.

Sec. 1. (a) Bulk and minibulk storage containers and appurtenances shall be constructed, installed, and maintained so as to prevent the discharge or the spill of liquid pesticide.

(b) Storage containers and appurtenances shall be constructed of materials which are resistant to corrosion, puncture, or cracking.

(c) Materials used in the construction or repair of storage containers and appurtenances may not be of a type which react chemically or electrolytically with stored liquid pesticide in a way which may weaken the storage container or appurtenances, create a risk of discharge, or adulterate the pesticide.

(d) Metals used for valves, fittings, and repairs on metal containers shall be compatible with the metals used in the construction of the storage container so that the combination of metals does not cause or increase corrosion which may weaken the storage container or its appurtenances or create a risk of discharge.

(e) Storage containers and appurtenances shall be designed to handle all operating stresses, taking into account static head,

pressure build-up from pumps and compressors, and any other mechanical stresses to which the storage containers and appurtenances may be subject in the foreseeable course of operations. Sec. 3. (a) Bulk and minibulk pesticide storage containers are considered abandoned if they have been out of service for more than six (6) months because of a weakness or leak or have been out of service for any reason for more than two (2) years.

(b) Abandoned underground structures, including abandoned underground catch basins, shall be thoroughly cleaned and removed from the ground or thoroughly cleaned and filled with an inert solid. All connections and vents shall be disconnected and sealed. A record of the structure size, location, and method of closing shall be maintained at the storage facility or as otherwise provided for in this article.

(c) Abandoned aboveground bulk and minibulk pesticide containers shall be thoroughly cleaned. All hatches on the containers shall be left open, and all valves or connections shall be severed and left open.

(d) Secondary containment is not considered abandoned merely because there have been no discharges into the secondary containment. Affected: [IC 15-16-4](#); [IC 15-16-5](#)

Sec. 1. (a) Operational areas at a storage facility for bulk and minibulk containers shall have containment that is curbed and paved with reinforced concrete or other approved material that provides an impervious surface. Operational area activities shall be carried out within this containment.

(b) The operational area containment shall be constructed and reinforced to support the foreseeable maximum gross load of all product, equipment, and motor vehicles utilizing the area. The containment shall have a minimum width of ten (10) feet, a minimum length of twenty (20) feet, and a minimum capacity of seven hundred fifty (750) gallons. Points of loading and unloading shall be positioned over the containment.

(c) Wherever sufficient capacity required in 355 IAC 5-4-1(c) and provisions of this rule are complied with, the secondary containment described in 355 IAC 5-4 may be designed for and jointly used in lieu of a separate operational area containment.

(d) The operational area containment shall form or drain into a watertight catch basin. If the operational area containment drains to a sump, the catch basin may include the sump and an aboveground container, provided a pump is installed which automatically transfers the contents of the sump into an aboveground container. Containers used for the temporary storage of liquids collected from the operational area containment shall be located within secondary containment.

(e) All liquids shall be promptly removed from the operational area containment for use in the blending process or for proper disposal in accordance with all applicable rules. The capacity required in subsection (b) shall be available at all times.

(f) Storage containers and appurtenances shall be protected against reasonably foreseeable risks of damage by vehicles operating in the area.

(g) This section does not apply to the unloading of mobile containers at the pesticide application site.

(h) Operational area containment shall be maintained as necessary to assure compliance with this rule.

(i) Alternative means, including portable operational area containment systems, shall be permitted to serve as operational area containment systems if approved. Affected: [IC 15-16-4](#); [IC 15-16-5](#)

Sec. 1. (a) Liquid bulk and minibulk pesticide storage containers shall be located within secondary containment constructed with an impermeable floor and perimeter wall. Secondary containment for liquid bulk storage containers must have a sloped floor. Secondary containment for minibulk storage containers is not required to have a sloped floor.

(b) The secondary containment area for liquid bulk pesticide storage containers shall be separate from a secondary containment area for all other materials. The secondary containment area for liquid minibulk pesticide containers is not required to be separate from a secondary containment area for other chemical storage containers. Adjoining secondary containment areas may share impermeable common walls.

(c) Secondary containment not protected from rainfall shall at all times have a minimum capacity of one hundred percent (100%) of the volume of the largest storage container within the contained area plus the volume displaced by all the other tanks, equipment, and appurtenances in the area up to the safe design level of the containment structure, plus a freeboard of six (6) inches.

(d) Secondary containment protected from rainfall is not required to have the freeboard noted in subsection (c), but shall comply with all other requirements therein.

(e) Secondary containment constructed prior to enactment of this rule and that has a capacity of a minimum of one hundred ten percent (110%) of the volume of the largest storage container within the contained area plus the volume displaced by all the other tanks in the area up to the safe design level of the containment structure shall be deemed to be in compliance with this rule. A storage facility upon alteration of the secondary containment area or increases in storage container volume shall be brought into full compliance within ninety (90) days of alteration or increase.

(f) Open drains and permeable tile drainage shall not be permitted within or under secondary containment. Sec. 2. (a) The walls of secondary containment shall be constructed of steel, poured reinforced concrete, pre-casted concrete modules, or solid masonry and be designed to withstand a full hydrostatic head of discharged liquid and weight load of material used in construction.

(b) Cracks and seams shall be sealed to prevent leakage.

(c) Walls shall not exceed six (6) feet in height above interior grade unless provisions are made for normal access and necessary emergency access to storage containers, valves, and other equipment, and for safe exit from the secondary containment.

(d) Walls constructed of concrete or solid masonry shall rest upon a floating floor of concrete prepared as in section 3(b) of this rule or upon suitable concrete footings which extend below the average frost depth. Joints between walls and the floor shall be watertight. Sec. 7. (a) Double wall storage containers may be used to comply with the secondary containment requirements in this rule. A double wall storage container must be constructed to be at least as protective in preventing spills to the environment as the other secondary containment options described in this article.

(b) Individual storage containers not exceeding three thousand (3,000) gallons may be contained within an elephant ring in lieu of secondary containment.

(c) Both the storage container and the elephant ring shall be fabricated of materials compatible with each other and with

the pesticide being stored. The storage container and the elephant ring shall be constructed of similar metals. Elephant rings shall not be constructed of plastic.

(d) The height of the elephant ring wall shall not exceed four (4) feet. The minimum capacity of the elephant ring shall be one hundred percent (100%) of the volume of the storage container plus the volume displaced by all equipment and appurtenances in the secondary containment vessel up to the safe storage level of the elephant ring, plus a freeboard of six (6) inches. An elephant ring protected from rainfall is not required to have the freeboard of six (6) inches.

(e) The elephant ring shall be free of leaks and structural defects. The base shall be protected from corrosion, both from inside and outside, and shall be underlain by a concrete pad or by eight (8) inches of compacted gravel beneath four (4) inches of compacted sand or as recommended by the manufacturer of the elephant ring and approved by the state chemist.

(f) The elephant ring shall not have a relief outlet or valve. No appurtenances shall extend through the wall of the elephant ring. Pumps located within the elephant ring shall be placed on an elevated platform.

(g) Liquid shall be removed from the elephant ring by means of a manually activated pump for use in the blending process or disposal in accordance with all applicable regulations.

(h) Elephant rings shall be maintained as necessary to assure compliance with this rule.
